

Agri-COOL

ADVANCED COOL ROOF RESTORATION SYSTEMS

Address your roof issues one last time

Watertight - All Seams and Fasteners Sealed
Cool Roof Technology Reduces Heat Stress on
Housed Livestock
Eliminates existing roof tear off
Extends life of aging building roofs
Sustainable - May be recoated indefinitely

Advanced Cool Roof Systems

Benefits of C3-Ag Advanced Cool Roof Restoration Systems

Watertight—"GUARANTEED" - An Agri-COOL system addresses all sources of roof leaks by sealing all seams, fasteners, and penetrations.

High Reflectivity and Emissivity—Energy Star tested up to 88% reflectivity for UV light with emissivity ratings of 90% allowing the coating to release any heat that is absorbed keeping the roof surface +/- 10 degrees from ambient temperature.

Extends Building Life—An Agri-COOL Advanced Cool Roof System will reduce expansion and contraction stresses on your building providing years of leak free service.

Reduced Heat Stress—A cool roof surface will reduce radiant heat resulting in up to 12 deg lower interior temperatures dramatically reducing heat stress on all livestock or temperature sensitive products housed within.

Low Cost - Permanent Solution—Compared to conventional roof replacement costs, an Agri-COOL Advanced Cool Roof Restoration System provides the most cost-efficient, long-term solution for your agricultural related needs.

No Existing Roof Tear-off—The current roof is maintained in-place and with "as needed" recoats every 10 to 15 years, the roof is sustainable for life. This results in major labor and material savings both immediate and over the life of the building - **"MONEY SAVED"**.

No Internal Disruption of Operations-The Agri-COOL System is applied externally and can be installed with NO disruption to current operations - No contamination - No debris - No need to shut down operations.
